Basic ideas

This example demonstrates the PDF version of the writing template. Replace the text and metadata with your own material.

1.1 Definitions and proofs

Definition 1.1 Even integer

An integer n is even if $n = 2k$ for an integer k .

Theorem 1.1

The sum of two even integers is even.

Proof. Write the integers as $2m$ and $2n$. Their sum is $2(m + n)$, so Definition 1.1 applies. $\square$

1.2 Equations

Fractions use native Typst typesetting, as in $\frac{A}{B}$. Only labeled display equations receive a number:

$$\frac{1}{2} + \frac{1}{3} = \frac{5}{6} \tag{1.1}$$

Refer to Equation (1.1). An unlabeled equation does not consume a number:

$$(a + b)^2 = a^2 + 2ab + b^2$$
